

AT&T – HOW TO ADD SENDERS TO YOUR INBOX

AT&T

To get autoresponder emails into your AT&T inbox instead of spam, first mark them as "Not Spam" from your spam folder; then, create a filter in your AT&T settings to automatically move messages from that sender or with specific keywords directly to your inbox, ensuring you're not unsubscribing if it's a necessary auto-reply.

For the AT&T User (Receiving the Email)

1. Mark as "Not Spam":

- Go to your Spam folder in AT&T.
- Open the email or check the box next to it.
- Click the "Not Spam" button in the toolbar to move it to your inbox.

2. Create a Filter:

- Click the **Gear icon** (Settings) in your AT&T email.
- Go to **More Settings > Filters**.
- Select **Add** to create a new filter.
- Set conditions (e.g., "From" a specific address or containing certain words).
- Choose to **Move to Inbox** and **Save**.

3. Check Marketing Settings (If from AT&T):

- Sign in to your AT&T account.
- Go to your profile and find the **Marketing** section.
- Adjust your preferences for AT&T offers.
