

MyYahoo – HOW TO ADD SENDERS TO YOUR INBOX

MyYahoo

To get your autoresponder emails into your Yahoo inbox instead of spam, first, move existing messages from Spam to Inbox and mark as "Not Spam," then create a [filter in Yahoo Mail Settings](#) to direct emails from that sender/address to your Inbox, and consider adding the sender as a contact to improve deliverability.

1. Train Yahoo's Filter (Immediate Fix)

- Go to your **Spam folder** in Yahoo Mail.
- Select the emails from your autoresponder.
- Click the "More" icon (three dots) and choose "**This is not spam**" to move them to the Inbox.

2. Create a Filter (Proactive Solution)

- Open an email from the autoresponder in your Inbox.
- Click the **three dots** (More) above the message and select "**Filter messages like this...**" or go to Settings (gear icon) > More Settings > Filters > Add new filters.
- Set criteria (e.g., "From" address, specific words) to identify these emails.
- Choose to "**Move the message to:**" your **Inbox** (or a specific folder).

3. Add Sender as a Contact

- Add the autoresponder's email address to your Yahoo contacts.
- Give the contact a clear name, as this signals to Yahoo that the sender is trusted.

4. Check Your Settings

- Review your existing filters to ensure none are mistakenly sending these emails to Spam or Trash.
- Adjust aggressive filter settings if they're causing valid emails to be blocked.

By doing these steps, you teach Yahoo's system that these emails are legitimate and set up rules to ensure they land in your Inbox automatically.
